

EXTERNAL RISK ASSESSMENT REPORT

SA VPS Exposure - CVE-2019-0708 BlueKeep

Analyst: Neo NL | CTI Analyst

Date: 2026-04-17

Classification: Portfolio/GitHub - Redacted

SCOPE & ETHICS

Passive OSINT assessment only. No authentication attempts, exploitation, or active scanning performed. Evidence has been redacted for public release.

EXECUTIVE BRIEF

Assessment identified an internet-exposed Microsoft RDP service on a South African VPS. The assessment focuses on exposure analysis, vulnerability context, and remediation.

ASSET PROFILE

Hostname: [REDACTED]

Organisation: [REDACTED]

Location: Johannesburg, ZA

Service: RDP TCP/3389

Operating System: Windows Server 2016

FINDINGS

RDP exposure increases attack surface. CVE-2019-0708 BlueKeep is a critical remote code execution vulnerability requiring patching and access restriction.

MITRE ATT&CK; Mapping

T1133 External Remote Services

T1190 Exploit Public-Facing Application

T1110.001 Password Guessing

RISK RATING: HIGH

Internet exposure combined with critical vulnerability history requires remediation.

RECOMMENDATIONS

1. Apply Microsoft security updates.
2. Remove RDP exposure from the public internet.
3. Use VPN/jump host access.
4. Enforce MFA and strong account controls.
5. Monitor authentication events.
